### Description

Mid-season productive variety. Interesting dwarf variety. Plant height 80-100cm, require garters and moderate forming. Fruits are very beautiful - elongated type (7-9cm), crimson-red with thick yellow stripes, saturated purple-black tan from the top (the sunny side) of the fetus. Tomatoes are an excellent texture, dense, meaty with a small amount of juice, delicious, weighing up to 100-120g. The variety is very resistant to fungal diseases and viruses (fruiting until frost).
